

24,25(OH)₂ D and Free 25-OHD

DEQAS is inviting laboratories who can measure 24,25(OH)₂D and / or Free 25-OHD to consider submitting results on the samples distributed for Total 25-OHD.

Results for 24,25(OH)₂D can be entered in the boxes provided on the usual results submission form. Approximately 8 participants are currently returning results, which are published with the final report.

At the moment Free 25-OHD results should be e-mailed to DEQAS, giving your Lab code and the method used. If we have sufficient interest, these will also have results boxes provided.

There is no additional charge for these schemes, which are not part of performance assessment. Whilst we would like the results submitted before the usual deadline, late results would still be welcome.
